

Unknown Title

China-League of Arab States Cooperation Initiative on Data Security

2021-03-29 18:54

On March 29, 2021, the Ministry of Foreign Affairs of China and the General Secretariat of the League of Arab States (LAS) co-chaired the China-LAS video conference on data security. Officials responsible for cyber and digital affairs from both sides as well as member states of LAS were present at the meeting. LAS welcomed the Global Initiative on Data Security put forward by China, and supported addressing data security risks and challenges together with China while upholding multilateralism, balancing security and development, and ensuring fairness and justice. The two sides agreed to the following:

The phenomenal development of information technology revolution and digital economy is transforming the way of production and life, exerting far-reaching influence over social and economic development of States, global governance system and human civilization.

The explosive growth and aggregation of data, as a key element of digital technology, has played a crucial role in facilitating innovative development and reshaping people's lives, bearing on security and economic and social development of States.

In the context of closer global cooperation and new development of international division of labor, maintaining supply security of ICT products and services has never become more important for boosting users' confidence, ensuring data security and promoting digital economy.

We call on all States to put equal emphasis on development and security, and take a balanced approach to technological progress, economic development and protection of national security and public interests.

We reaffirm that States should foster an open, fair and non-discriminatory business environment for mutual benefits, win-win outcomes and common development. At the same time, States have the responsibility and right to ensure the security of important data and personal information bearing on their national security, public security, economic security and social stability.

We welcome governments, international organizations, ICT companies, technology communities, civil organizations, individuals and all other actors to make concerted efforts to promote data security under the principle of extensive consultation, joint contribution and shared benefits.

We underscore that all parties should step up dialogue and cooperation on the basis of mutual respect, and join hands to forge a community with a shared future in cyberspace featuring peace, security, openness, cooperation and order.

To make this happen, the two sides would like to suggest the following:

-States should handle data security in a comprehensive, objective and evidence-based manner, and maintain an open, secure and stable supply of global ICT products and services.

-States should stand against ICT activities that impair or steal important data of other States' critical infrastructure, or use the data to conduct activities that undermine other States' national security and public interests.

-States should take actions to prevent and put an end to activities that jeopardize personal information through the use of ICTs, and oppose unauthorized collection of personal information of other States with ICTs as a tool.

-States should encourage companies to abide by laws and regulations of the State where they operate. States should respect the sovereignty, jurisdiction and governance of data of other States, and shall not obtain data located in other States through companies or individuals without other States' permission.

-Should States need to obtain overseas data out of law enforcement requirement such as combating crimes, they should do it through judicial assistance or other relevant multilateral and bilateral agreements. Any bilateral data access agreement between two States should not infringe upon the judicial sovereignty and data security of a third State.

-ICT products and services providers should not exploit their products and services to illegally obtain users' data, control or manipulate users' systems and devices.

-ICT companies should not seek illegitimate interests by taking advantage of users' dependence on their products, nor force users to upgrade their systems and devices. Products providers should make a commitment to notifying their cooperation partners and users of serious vulnerabilities in their products in a timely fashion and offering remedies.

The two sides call on all States to support this initiative, and confirm the aforementioned commitments through bilateral, regional and international agreements. We also welcome global ICT companies to support this initiative.
